# Hololight Hub

## Updates

### Users

- Newly added users, on creation of their account, receive an email with a link to complete the setup of their account, including creating their own password.
- New “Profile” page allows you to:
  - Change your user profile picture.
  - Change your password.
- Added forgotten password functionality that lets you reset your password through an email sent to your Hololight Hub account’s verified email address. This email includes a link which walks you through setting a new password.
- Removed the possibility for an administrator to specify a password when they add a user.
- Edit previously added users’ details, including name, sign-in method, and access role.
- View the activation status of individual users and added a button to resend activation emails if a user did not activate their account before the activation link expired.
- Suspend individual user accounts, which deactivates a user’s ability to sign in.
- Delete individual user accounts, which removes the user from the tenancy and revokes access to Hololight Hub.
- Removed user credits.

## Applications

- Upload files to predefined Windows folders. These folders are then accessible to the application. The folders are:
  - 3D Objects
  - Documents
  - Downloads
  - Music
  - Pictures
  - Videos
- Application session's status updates automatically without the need for a refresh button.
- Application sessions shut down automatically if someone does not connect to the session with Hololight Hub Client within a predefined period of time after session startup. This timeframe is defined by the administrator when they upload the application. This avoids unintentional resource use if a user does not connect to a started session.
- Upload applications built with Hololight Stream 2024.0.0. To connect to sessions with applications using this version of Hololight Stream, you need to download and use Hololight Hub Client version 2024.1.0.
- Select which XR devices are supported by a given application.
- Specify which users within a tenancy are allowed to access the application.
- Edit application details after the application is added.
- Delete applications. When deleted, users will no longer have access to the application.
- Hololight Hub restricts application uploads to ZIP files only. Before, when uploading an application, it was possible to upload a folder instead of a ZIP file.

## UI and UX

- Added tables for viewing and managing users and applications as well as viewing a user's activity history.
- Additional analytical information, including:
  - Users' time spent running specific applications per month.
  - A history of individual sessions using the application.
- Increased the time you can remain signed in from 15 to 60 minutes.
- Removed "Getting started" page. That information is now available on the [\*\*Hololight support base\*\*](#). In addition, Hololight Hub now has a link to the Hololight knowledge base.
- Fixed bug where running sessions showed a stop time in the year 1970. Instead "Running" now appears in the "Stop time" column when a session is running.

## Clients

- Updated Hololight Hub Client on all devices to support applications using Hololight Stream 2024.0.0.

## Known issues and limitations

- Applications built with DirectX 12 crash on Hololight Hub.
